-τωρ	noun	agent	ῥέω < ῥήτωρ
-υνω			
-ω	adverb		often a termination on prepositions
-ως	adverb	often created by borrowed the genitive plural of the corresponding adjective and changing –ν to -ς.	

To these can be added

all the <u>personal endings</u> on verbs, the <u>case and number terminations</u> on nouns and adjectives.

the consonant variables on the ends of some prepositions and adverbs if placed before a word beginning with a vowel dropping the final vowel on prepositions ending in a vowel (except ἀμφί, περί, πρό) when they appear before words beginning with a vowel: ἀνα < ἀν', διά < δι', παρά < παρ', ἀντί < ἀντ' (ἀνΘ' rough breathing), ἀπό < ἀπ' (ἀφ' rough breathing), κατά < κατ' (καθ' rough breathing), μετά < μετ' (μεθ' rough breathing), ὑπό < ὑπ' (ὑφ' rough breathing) ἐπί < ἐπ' (ἐφ' rough breathing). The same thing happens with prepositions that are prefixed to make compounds verbs, nouns, and adjectives.

adding a final consonant to prepositions and adverbs before words beginning with a vowel: ἄχρι < ἄχρις, ἐκ, ἐξ; οὐκ, οὐχ (before rough breathing), ἕνεκα < ἕνεκεν

ν-movable on third person singular verbs ending in –ε or -σι ahead of vowels and punctuation:

-ε on imperfect actives, aorist actives, pluperfect actives;
-σι on third plural active present and active future and passive future;
-σι also on third plurals of the consonant declension.

using the accusative neuter singular of a comparative adjective to create a corresponding comparative adverb: -τερον < -τερος; -ιον < -ιων;
using the accusative neuter plural of a superlative adjective to create a corresponding superlative adverb: -τατον < -τατος; -ιστα < -ιστος

PREFIXES

α(ν)- nouns or verbs negates the root nouns, verbs, adjectives
πιστός < ἄπιστος, ἀπιστέω, ἀπιστία
NOTES: called "a-privative." Accents on a-privative adjectives are recessive; a-privative adjectives are two-ending adjectives, where the masculine-looking form covers masculine and feminine. The prefix is αν- before roots that begin with a vowel

To these can be added

the ε– syllabic augment (and vowel lengthening) for the secondary tenses in the indicative mood: imperfect, aorist (active and passive), pluperfect.

the syllabic reduplication for the perfect system with verbs beginning with a consonant.

Prepositions are regularly prefixed to verbs nouns and adjectives. When that happens with verbs the prefixed preposition may be restated with the object of the verb. Sometimes the sequential preposition is omitted and the case required by the preposition normally appears after the verb rather than the normal case that would have followed the uncompounded verb.

INFIXES

ε-ο	modification for changing verb roots into nouns and adjectives
-ι-	ι-diminutive smaller ἀρνός < ἀρνίον, βίβλος < βιβλίον, γυναικάριον < γυνή, δαίμων < δαιμόνιον, κοράσιον παῖς, παιδίον, τέκνον < τεκνίον.

To these can be added

the tense signs in verbs—which occur between the root and the (connecting vowel and) the personal endings: -σ- for future, -(σ)α-for first aorist, -(κ)α-.perfect active, -(θ)η- for aorist passives, -(θ)ησ- for future passives.

the connecting vowels between tense sign and personal endings—except for the perfect middle and passive: the ο/ε variable in the present imperfect, future, and second aorist; along with the lengthened ε/ο variable that serves as the subjunctive sign (< η/ω).

tone marks (“accents”), which appear over the vowels on one of the last three vowels or diphthongs in a word: recessive with finite verbs and α–privative adjectives.

COMPOUNDING
